TECHNOLOGY OPPORTUNITIES

Enterprise Europe East of England (formerly East of England IRC) helps regional businesses to source new products or technologies and to find markets for their own newly developed technologies. The following are some of the latest opportunities available through the Enterprise Europe Network:

OFFERS

A new bacterial chitinase with antifungal activity of broad spectrum

A Spanish Research Institute has patented a new natural biodegradable product to avoid fungal plant pathogen infections in the field and under storage. Available for licensing in the agro and feed and food sectors and the plant, animal and human health sectors as well.

Device for separation of oils and other hydrocarbon fluids from water surface

A small Polish company has developed a device for separation of oils and other hydrocarbon fluids from water surface. The oil trap is a universal, incredibly efficient device for collecting all types of oil derivative water pollutants. Commercial partners are sought.

Running shoe that eliminates harmful impact on heel

A small UK organisation has designed and successfully tested a new type of shoe that protects runners from harmful repetitive

impact on the heel. The design has been developed to reduce the initial increase in impact force during the foot strike. The developer is seeking partnerships for the exploitation of this novel footwear.

Seed coating formulation and technology increasing resistance of seeds to low temperature and phytotoxic effects

An Austrian SME has developed a novel seed coating formulation, which uniquely reduces sensitivity of seeds/seedlings to cold temperature. This enables extension of growing areas to more northern regions or seasonally earlier cultivation and harvesting. Additionally negative side effects of plant protectants are minimised and germ formation capacity is significantly increased. It is best suited for corn, rape-seed, sunflower, sugar beet.

Apparatus for detecting types of mist and visibility

A German University invented a sensor for automatic differentiation of mist types and measuring of visibility range. This combination of features is not offered by any other known visibility sensor. The invention provides a solution to the differentiation of fog types by measuring scattered light at three different angles. Commercialisation partners are sought.

Miniature refrigeration system for microelectronics

A London-based university has

developed a miniature refrigeration system for improved cooling of microelectronics devices. The university is producing a prototype and is looking for partners to test and implement the device and partners to assist in ongoing miniaturisation of the refrigeration system.

REQUESTS

Low Flavour Impact Natural Food Preservative Ingredients Sought

A UK based multinational is looking for new natural food preservative ingredients. The preservative must have minimal impact on the taste of a food and is intended as a safe natural alternative to synthetic compounds. The preservative must be approved for food use and available for testing (i.e. near market).

System for fruit and vegetable dehydration using geothermal energy

A Turkish company, specialized in applications of renewable energy technologies for agriculture, is in search of a food dehydration technology based on geothermal energy. Currently, the company owns and operates geothermal wells at the 60C-90C range for greenhouse heating, and is looking for technology partners to provide vegetable and fruit drying solutions with low enthalpy

geothermal resources.

Manufacturing partner required to produce Foley/indwelling catheters

A North East England based Innovation Centre is looking for a manufacturing partner with the capability of soft tooling or rapid prototyping novel components such as silicon or latex Foley/indwelling catheters for the medical sector. A subcontracting agreement or commercial agreement with technical assistance is sought.

Robotics Expertise Required for Consumer Goods Packing

A UK based multi-national consumer goods company would

like to partner with academia and other organisations to gain knowledge of the current state of the art in the area of robotic packing equipment with a view to implementing next generation technology within its manufacturing facilities. Proposed technologies can be commercially available or under development in industry or academia.

For further information on any of the above opportunities, or to find out more about Enterprise Europe services, contact Kate Duggan on 0845 313 2549 or by emailing k.duggan@businesslinkeast.org.uk

'New technology is replacing your jobs, but the good news is we will be keeping you on. Who's willing to go on a computer course?'

Reach for the sky.
